[Accès au service](#)[Demande de support](#)

Conditions d'utilisation :

The eduroam service aims to provide secure wireless access to the Internet for staff and students of the higher education/research community when they travel. Users from one member institution can access the Internet from all other member institutions using their usual password.

Présentation :

Summary: The eduroam service provides secure wireless access to the Internet for staff of higher education and research institutions when they travel.

Beware, the setting "server certificate" will be changed on Monday November 23 2020 (moving to an other certification authority : : migrating from "DigiCert Assured ID Root CA" to "AAA Certificate Services"). Please have a look on the FAQ to set your connection.

eduroam allows students, researchers and staff from participating institutions to obtain Internet connectivity across campus and when visiting other participating institutions by simply opening their laptop and using their IT account from their institution.

eduroam users have to **respect the [terms of use](#)**.

Before using eduroam, fill your connection settings as needed for your system by following the **setup guides**.

eduroam support is provided by your home institution.

FAQ :

Tout déplier/replier

⊖ Eduroam - how to use the CAT eduroam tool ?

Eduroam - how to use the CAT eduroam tool ?

The tool CAT (Configuration Assistant Tool) eduroam provides an automatic setup of your device.

This is the recommended method except for Linux systems for which direct setting is required.

A detailed help sheet is available for each system in the FAQ.
